

NEW UPDATE!
NOV. 2023

WORLD MARKET LEADER IN CERAMIC DENTAL IMPLANTS

CONTINUING EDUCATION PROGRAM 2023 – 2024

SDS SWISS DENTAL
SOLUTIONS 

CLEANEST IMPLANT COMPANY IN THE WORLD

As the world market leader for CERAMIC DENTAL IMPLANTS, SDS places the highest priority on the biological and immunological aspects. SDS can proudly call itself the “Cleanest Implant Company in the World”, as it is the only company worldwide to have been awarded both the “Trusted Quality” mark for its dental implants and the “Certified Production Quality” for its manufacturing process by the CleanImplant Foundation. SDS SWISS DENTAL SOLUTIONS is also the first and only company to have a CleanImplant accredited navigation system: the “fully guided” navigation system SDSBOX and the “ad hoc” navigation system SDSAIM. By the end of 2022, over 500 SDS user practices will be awarded the CleanImplant “Certified Dentist” seal. Join us on a path to better dentistry.

WORLD MARKET LEADER IN CERAMIC DENTAL IMPLANTS

SDS SWISS DENTAL
SOLUTIONS 

SDS SWISS DENTAL SOLUTIONS AG Konstanzerstrasse 11

The company

SDS SWISS DENTAL SOLUTIONS

Founded by ceramic pioneer and implantologist Dr. Karl Ulrich Volz, SDS SWISS DENTAL SOLUTIONS offers a comprehensive treatment concept for biological-immunological implant solutions with ceramic implants.

Dr. Karl Ulrich Volz

A SAFE SOLUTION BY MEANS OF CERAMIC IMPLANTS

They meet the highest standards in terms of compatibility, health and aesthetics. Regardless of whether titanium intolerance or a general discomfort with metal suggests a metal-free restoration to your patient - the highly aesthetic white ceramic implants made of the biocompatible high-performance material zirconium oxide from SDS SWISS DENTAL SOLUTIONS are the solution.

WHO RECOMMENDS CERAMIC IMPLANTS

On September 21, 2021, WHO Chairman Prof. Dr. Thomas Zeltner, former Minister of Health of Switzerland, strongly recommended ceramic implants and advised not to wait another five years, but to use them now - because, according to the WHO Chairman, the data situation is now sufficient.

(Only available in German)

ZIRCONIA MORE STABLE THAN TITANIUM

The implants from the world market leader SDS are now more stable than any titanium implant with the same diameter.

WHAT MAKES CERAMIC IMPLANTS FROM SDS SO ATTRACTIVE FOR USERS?

Biologically oriented dentistry with ceramic implants

SDS's Dynamic Thread® enables immediate implant placement in all regions

World market leader with more than 20 years experience

Ceramic implant users are growing overdimensionally compared to the general market

Ceramic implants, augmentation and navigation systems, biological treatment protocol and micronutrient products from a single source

WHY CERAMIC IMPLANTS FROM SDS?

SDS SWISS DENTAL SOLUTIONS is a highly innovative and fast growing manufacturer of ceramic implants with a focus on excellent education in our in-house SWISS BIOHEALTH EDUCATION CENTER, supported by the expertise of 10 in-house dentists/surgeons working in our own SWISS BIOHEALTH CLINIC, developing and reviewing the concepts and products and then teaching them in the advanced and continuing education courses.

Hello and welcome to the SWISS BIOHEALTH EDUCATION CENTER

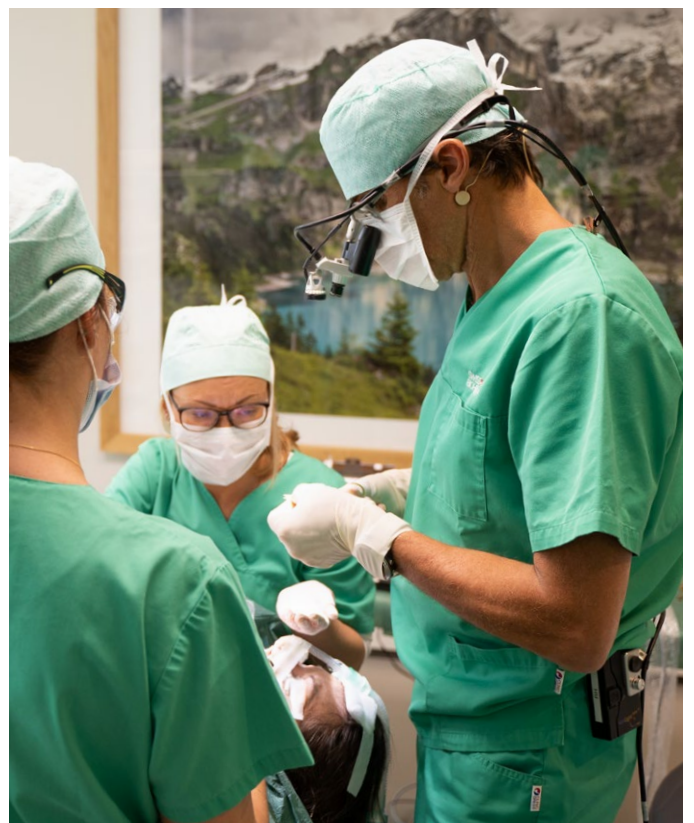

SWISS PRECISION AND RELIABILITY - also in continuing education and training?

ABOLUTELY! SDS SWISS DENTAL SOLUTIONS, the undisputed world market leader for ceramic dental implants, has created a unique setup in the context of the SWISS BIOHEALTH GROUP to provide you with the SWISS BIOHEALTH EDUCATION CENTER in a healthy, Swiss-stylish, friendly, collegial ambience to give you a new home for your thirst for knowledge and your enthusiasm for your profession.

You want to reach the next level as an implantologist and prosthodontist as quickly and effectively as possible by “chunking” courses and learning from the best in each field at a single location?

This is exactly what we offer you at our headquarters in Kreuzlingen, Switzerland, 100 meters from the German border! You know that you can never really absorb the meaning of a book if you only read a few pages a month for a year, so we have bundled each subject area, such as the BONE AUGMENTATION WEEK, into “chunks”, so that you advance day by day and level by level in the respective area over a short span of time to become an absolute professional in the subject of your choice. This is based on the same wisdom as the fact that you will internalize a book much better if you read it in one go over a rainy weekend!

An inside look at the SOUL FOOD vegan café & take away

The SOUL FOOD vegan café & take away offers our continuing education participants the opportunity to eat healthy and varied food throughout the day, in addition to our catering at lunchtime. The assortment is vegan, gluten- and sugar-free and consists of a variety of hot and cold bowls, smoothies, mueslis, salads and fine baked goods. In addition, there is always a freshly prepared soup of the day, fine vegetable quiches, fruit infused water and much more.

As an alternative to refined sugar, we only use coconut sugar, birch sugar and date sugar, all long-chain carbohydrates that not only keep your insulin levels down, but also do not harm your teeth. We avoid the gluten protein in cereals such as spelt, rye and barley and use rice and millet wholemeal flour, buckwheat or cassava flour as substitutes.

At in-person events, you will receive one CHF 25 voucher credit for SOUL FOOD per event day, which you can spend as you wish.

A glimpse into the SWISS BIOHEALTH CLINIC

In the SWISS BIOHEALTH CLINIC in Kreuzlingen a unique symbiosis of holistic medicine and biological dentistry is created, it sets new standards and is one of the most modern and innovative dental practices worldwide. All our products, concepts and techniques are tested and further developed here. As soon as they have proven themselves in daily clinical practice, we share our “best practices” and recommendations in our courses, including indications and tools of the trade.

The unique therapeutic approach, summarized in the SWISS BIOHEALTH CONCEPT, is based on the rapid and comprehensive elimination of all sources of stress and interference fields with the goal of achieving the greatest possible improvement in health, well-being and functionality.

For the subsequent recovery, a soothing atmosphere is very important. The SWISS BIOHEALTH CLINIC must therefore meet not only the highest medical standards, but also exceptional demands in terms of ambience and exclusivity.

SDS ACT

ACTIVE

Start smart and organized with ceramic implants and let SDS work for you with the SDSBOX service

Getting started in ceramic implantology has never been easier than with the SDSACT starter concept! Intelligent simplicity with maximum safety is the focus of this training level. You solve all situations of late and delayed immediate implantation with a reduced portfolio of 6 implants, which, however, can be applied in two parts as well as in one part and thus offering you 12 options to choose from. This is a real added value that you generate for yourself and your patients with the 2.1_Value implant from SDS!

This cost-effective ceramic implant from the market leader SDS offers you the safety of SDS implants with the Dynamic Thread®, which has been tried and tested hundreds of thousands of times, but in a simple application and with significantly reduced costs - in other words, the perfect solution for standard situations!

For those of you who want it to be easier and safer, then simply let SDS work for you and order the SDSBOX, the new benchmark in "Biological and Digital Workflow"! Let the best and most experienced dental technicians and surgeons of the SWISS BIOHEALTH CLINIC plan and work for you: open the SDSBOX, place the surgical guide, insert the implant in the perfect position and provide your patient with a three-month dose of vitamin D3 and K2. Implanting has never been easier, faster and safer!

The positive side effect: You can be sure that no foreign bodies will get into your patient's bone with this navigation system, because SDSBOX was the first navigation system worldwide to be awarded the CleanImplant seal!

ONLINE COURSE

Dr. Karl Ulrich Volz presents this concept in the SDSACT online course. The online course can be booked at any time and accessed flexibly for 6 months.

SDS ACC

ACCELERATE

Expand your portfolio and offer your patients safe immediate implant placement in all regions including the upper molars

No patient finds it amusing to wait months after an extraction and then have to settle for suboptimal results due to the atrophied bone, which has occurred during the waiting period. As an „inert“ material, zirconium oxide ceramic has no free electrons on its surface and is therefore far superior to titanium in regards to infections. In addition, the implants from the world market leader SDS with its unique Dynamic Thread® and the special shapes, such as the balcony implant, can be implanted in really all alveoli. Even the upper molars have been implanted immediately and successfully by SDS users tens of thousands of times for many years.

In this course, you will learn directly from the founder and owner of SDS and the developer of the immediate implantation technique with ceramic implants, Dr. Karl Ulrich Volz. He will inform you about everything biologically and mechanically necessary to successfully implant ceramics in all alveoli immediately! This is where the premium line SDS 1.2_ and 2.2_Bright with some special shapes come into play.

The micronutrient supplementation is a bit more sophisticated at this level and continues to include vitamin C, magnesium and the anti-inflammatory omega three in addition to vitamin D3 and K2. Rounding out this concept is the use of ozone and blood concentrates. Accelerate your protocols and give your patients what they want: better results with fewer procedures!

ONLINE COURSE

In the SDSACC online course, Dr. Karl Ulrich Volz presents this concept of safe and fast immediate implant placement with ceramic implants. This online course can be booked and accessed at any time for a 6-month period. Following the course, a multiple-choice exam must be completed in the system.

SDS ALL

ALLINONE

Be part of a new way of dentistry oriented on
causes and results with a focus
on complete solutions

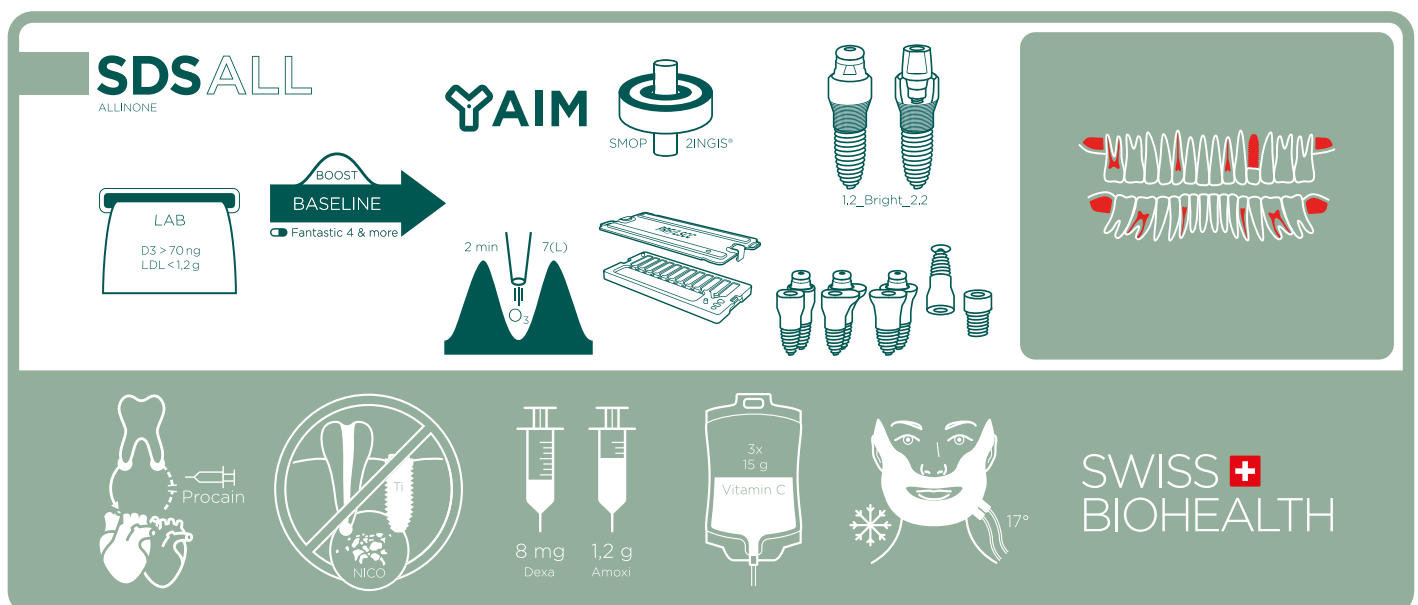

Ceramics and biology are your passion and you want to achieve a health improvement for your patients in addition to the optimal dental result? Here at SDS SWISS DENTAL SOLUTIONS and SWISS BIOHEALTH we are definitely the „world champions“, because no one has treated more, and more successfully, thousands of patients with this concept than Dr. Volz: from chronically ill patients to VIP's to gold medal winners. All of these successes from over 25,000 ceramic implants personally placed by Dr. Karl Ulrich Volz have made SWISS BIOHEALTH CLINIC the market leader in biomedical dental treatment. The clinic currently employs 10 dentists/surgeons and 5 physicians.

Hundreds of dentists have been trained by Dr. Volz in this forward-looking concept, which has become increasingly important since Corona, and which focuses on the causes of disease and unconditionally demands results. The program has trained over 50 dentists in the curriculum to become „Specialists in Ceramic Implants and Biological Dentistry“. Since the aim of this concept is to work through everything in one session if possible, we call it ALLINONE.

This course is offered exclusively here in Kreuzlingen in our SWISS BIOHEALTH EDUCATION CENTER, because we need the spatial proximity to the „cradle“ of the ALLINONE concept: the SWISS BIOHEALTH CLINIC. In this two-day advanced training course, you can expect an equal mix of practical demonstrations, workshops and

hands-on sessions. Dr. Volz explains in theory and practice the basics of biologic dentistry, such as the easily verifiable connections between oral interference fields and organs, the stresses caused by root-treated teeth, titanium implants and chronically fatty-degenerative jaw areas, so-called „NICOs“ (Neuralgia Inducing Cavitational Osteonecrosis according to Prof. Bouquot). For such comprehensive ALLINONE interventions, we determine not only the D3 but also the LDL value in order to reduce the risk of complications. This is done, among other things, with the professional and comprehensive micronutrient concept BASELINE and BOOST. We additionally safeguard these invasive procedures by the use of infusions, i.V. cortisol and antibiotic administration, and prevent pain and swelling with the Hilotherm cooling mask. In the ALLINONE concept, we pull out all the stops implantologically and make use of the entire 1.2 and 2.2 portfolio including the double balconies, the shorties and the sinus implants.

On the first day, an extensive ALLINONE live surgery will be performed in parallel to the course, and this will be shown repeatedly.

IN-PERSON COURSE

2-DAY IN-PERSON COURSE

- The proven SWISS BIOHEALTH CONCEPT (Biological Dentistry & Ceramic Implants)
- The ALLINONE complete restoration concept integrating THE SWISS BIOHEALTH CONCEPT
- Parallel ALLINONE live surgery transmission from the SWISS BIOHEALTH CLINIC
- AIM - ANATOMICAL IMPLANTATION METHOD and BISS - BONE IMPLANT STABILISATION SYSTEM
- ALLINONE case presentation
- High proportion of practical demonstrations and workshops
- Hands-on sequences with involvement of assistants

PARTICIPATION REQUIREMENTS

Participation in SDSALL requires prior participation in an SDSACT and/or SDSACC course.

Please watch Part 3 of „The Longevity Code“ on our YouTube channel before attending the course. The topics micronutrients, minerals and vitamins („Fantastic Four and More“) are explained there in detail.

DATES

Oct. 9 - 10, 2024 (Bilingual - German/English)

3 HRS FAST LANE CERTIFICATION COURSE

ONLINE COURSE

For those of you who are in a hurry or who simply don't have much time, Dr. Volz has shortened the most important elements of his SDSALL course to 3 hours and incorporated them into a sensational online course with green-screen technology, which you can register for quickly and easily on our website. Immediately after the course you have to answer 30 multiple choice questions correctly and you are unlocked to use the SDS implants!

You will receive your access data within 24 hours (on weekends within 48 hours) after receipt of payment to the e-mail address you provided during your registration. Please make sure that you have access to it and check your spam folder if necessary. The online course can be booked and accessed at any time for a 6-month period.

NOTE: For a successful certification you have to answer 70% of the questions correctly.

FAST LANE CERTIFICATION COURSE

SDS SWISS DENTAL
SOLUTIONS

SIGNATURE DAYS

Observe and learn from the routine
of tens of thousands of implantations

Have you always wanted to look over the shoulder of the pioneer of ceramic implantology and benefit from his incredible experience of over 25,000 personally placed ceramic implants? Dr. Volz has taken up this wish and, starting in 2023, has initiated the DR. VOLZ SIGNATURE DAYS: with the support of his large team of dentists, he will operate on 4 surgeries, which will be transmitted via 5 channels each to the participants on the large screen in the SWISS BIOHEALTH EDUCATION CENTER. Dr. Volz provides live commentary on his surgeries and decisions and is available to answer your questions between surgeries right in the Education Center.

Most of the cases will be performed using digital clone backward planning, fully navigated with the SDSBOX navigation system, to reduce surgical time and morbidity for the patient.

However, these surgeries could also serve as a role model for you, because you may also want to organize your practice in such a direction in the future, in order to be able to perform at least twice as many surgeries in the same amount of time. We hear again and again that you experience more than enough demand from patients, but are limited in operating time and personnel. Here, the SDSBOX system can not only significantly reduce the operating time, but also the prosthetic effort due to prefabricating the long-term temporaries.

ONE-TO-ONE SHADOWING

On each day of the SIGNATURE DAYS, 4 participants will have the opportunity to observe directly in one of the 4 operating rooms, including preparation, FDOK treatments, extractions, suture closure as well as the insertion of the long-term provisional, all performed by the dentists of the SWISS BIOHEALTH CLINIC.

DATES 2023

SDSCIW

CERAMIC IMPLANTOLOGY WEEK

Become an expert in biological dentistry and ceramic implants within a few days

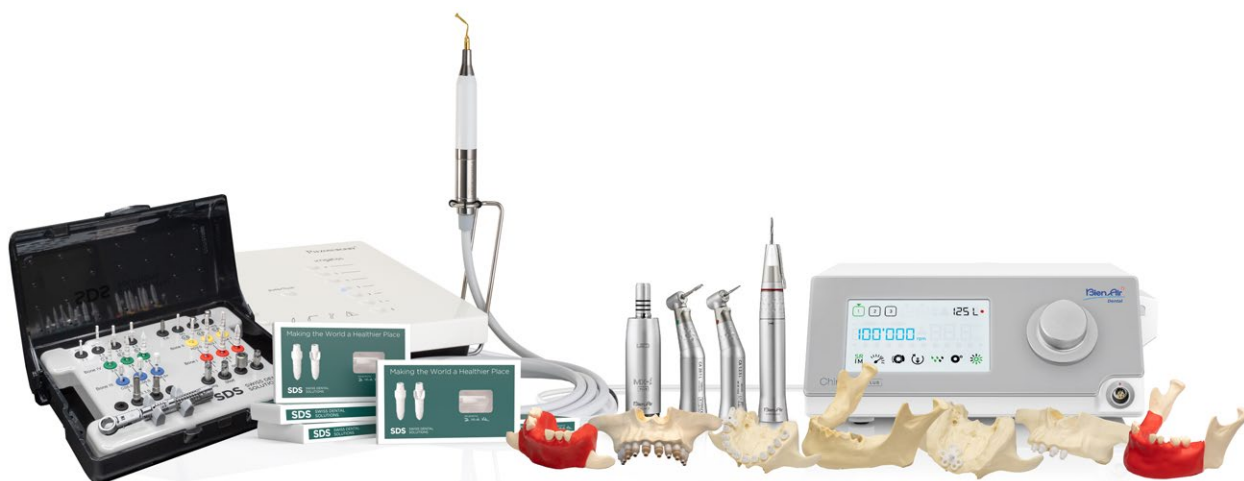

On previous pages of this continuing education brochure, we introduced the SDS ALLINONE concept and described the benefits you can generate for yourself and your patients with this biologically and immunologically oriented treatment concept! This two-day course is the proven way to the „Biological and Implantological Olympus“ par excellence and represents our absolute master course. Therefore, you should definitely take the time to attend levels 2 to 4 of the CERAMIC IMPLANTOLOGY WEEK as an advanced level. Of course, this does not apply to those of you who have been using SDSALL for some time and have already gained extensive experience with SDS ceramic implants.

Also in this intensive training week we will work with you step by step and level by level on the necessary knowledge and make sure that you will always have fun, get everything you need and in no case be bored with things that are unimportant. Since we dentists and implantologists are also craftsmen in a certain way and, due to our haptic inclination, like to apply everything practically right away, we have integrated two hands-on days into the CERAMIC IMPLANTOLOGY WEEK!

LEVEL 1 - CASE PLANNING

You probably also spend a significant part of your valuable time on implant planning? In principle, this is correct, because good planning reduces the execution time on the patient and prevents failures, surprises or complications. However, we believe that there is still great potential to reduce this effort to a fraction by implementing fixed decision algorithms in your case planning, which we call „painting by numbers“. To give you a simple example: the

decision which erupted wisdom tooth can be retained or should better be removed is made by us, our surgeons and our users within one second, exactly according to a fixed algorithm. *If the 8 is complete, even distally, surrounded by keratinized gingiva, we leave it in place. If not, then it must be removed, because this represents a periodontopathy and the deep gingival pocket or hood allows the pathogens - like a Trojan horse - to attack the middle germ layer, the bone, without maintaining the immunological protection of the outer germ layer, the keratinized gingiva.* According to these fixed algorithms, you will be able to quickly decide which teeth will be removed, in which positions implants of what length and diameter will be planned, and what will be the extent of the long-term temporary. Of course, we will also show you the possible applications of special shapes such as sinus implants, balcony implants, shorty implants and oval implants. How do you proceed with simultaneous removal/therapy of infections, cysts or osteolytic areas? How do we place implants in bone class IV or in the rock-hard bone class I? What techniques do we use to be able to place an immediate implant even in an upper septal region, even if there is no bone between the alveoli? In this course we will also focus on the most common mistakes in ceramic implantology that can lead to failure and how to avoid them. Because, as we all know, mistakes are the best way to learn. We will use many case studies to show you what you need to pay particular attention to. We also go into detail on the subject of complication management and how to react correctly if a complication occurs. This way you will be prepared for any situation. It is best to bring some OPG's and DVT's with you on a USB stick, so that you can plan these cases directly with our support. You will be especially impressed by the planning tool developed by Dr.

FURTHER INFORMATION

Karl Ulrich Volz, which you will take home with you for your later planning! Hand on heart: hardly any dentist understands his own treatment and cost plans, so how is a patient supposed to understand what you have in mind for him? However, if you provide the patient with an animation of the treatment result, your „closing ratio“ will increase massively. These animations will be created by you in minutes and will also serve as a perfect visual guide for yourself during the operation.

LEVEL 2 - SURGERY HANDS-ON COURSE

Now you are itching to use the basic and planning knowledge from the previous day to insert as many SDS implants as possible of the most varied geometries and all conceivable indications in the artificial jaw and to feel how the unique shape of the Dynamic Thread® almost magically finds its way into the bone that you have designated. There is no bumping during drilling, no slippage of the implant, no sticking, no spinning - the SDS implants simply „glide into place“ and you enjoy the experience of more than 20 years of ceramic implantology and thousands of surgery days, which have gone into the development of this system! On this first hands-on day, you will not only implant the simulated situations at your own workstation, which will be projected onto a 7 m wide LCD screen by the instructors using a clever camera technique, but you will also practice intelligent incision and suture techniques on special artificial jaws with imitation gingiva. These techniques help to maintain the blood supply and are minimally invasive, painless and swelling-free for the patient. Relief incisions and periosteal slits were eliminated from the program at SDS many years ago - because they leave and cause swelling, pain, scarring and destroy the blood

supply, increasing the risk of complications.

Your successful and easy introduction to implantology with SDS is guaranteed by the use of a navigation template (2ingis®), which you will find in the „SDSBOX“. This enables drilling and placement in an ideal implant position by means of prior three-dimensional planning by a surgeon of the SWISS BIOHEALTH CLINIC.

You will also work with the new ad hoc navigation system, the SDSAIM - ANATOMICAL IMPLANTATION METHOD on the artificial jaw model, place implants in the edentulous maxilla in absolutely perfect and parallel positions and at the same time generate optimal distances between the implants, which are essential for filling the interdental spaces with healthy papillae.

LEVEL 3 - PROSTHODONTICS HANDS-ON COURSE

On this further hands-on course day, everything revolves around the prosthetic standards in connection with SDS implants, which include both the final restoration with zirconia crowns and the restoration with manually and digitally fabricated long-term temporaries. After you have learned all the essentials from the preparation of the abutment to the placement of the definitive crowns, we will focus in the second part on the fabrication of perfect temporaries for immediate loading, as these can at best secure the surgical result, but can also negatively influence it in the event of incorrect loading. You will use various manual techniques to fabricate high-quality long-term temporaries on the model made the day before. You will also be introduced to the fabrication and processing of digital CAD/CAM long-term temporaries. You will real-

ize how important a parallel and perfect implant position is, because on this second practice day you will be able to fabricate an esthetically, and in terms of marginal fit and friction, perfect long-term temporary for the entire jaw in record time, which will provide you with completely new options for restoring the papillae and excellent esthetics in the subsequent surgery.

The particularly ingenious thing about these two practical hands-on course days is that you will take the models with the inserted implants and the long-term temporaries home with you and can use them later to educate your patients.

LEVEL 4 - SDSALL

You can find all the information on the previous pages (see SDSALL).

BOOKING INFORMATION

Places for the Surgical and Prosthodontics Hands-On Course are limited. This means that the people with booking of the whole week have priority.

As soon as the practical courses are booked, the individual levels will be released for booking. Our recommendation is to book the entire week with all levels in order to be able to take the maximum of knowledge with you. The direct entry into a higher level is only recommended if the participant is already an absolute expert on the previous level.

Please use the booking information on the following page to register via our website.

for 4.300 €*
*incl. 19% VAT

The following single courses are included:

- Oct. 5th – 10th: CERAMIC IMPLANTOLOGY WEEK - The course includes Case Planning, Surgery Hands-On, Prosthodontics Hands-On and SDS ALLINONE with Dr. Ulrich Volz and Dr. Ulrich Volz SIGNATURE DAYS
- Oct. 11th: Exclusive JCCI White Night Party
- Oct. 11th – 12th: 3rd JOINT CONGRESS for CERAMIC IMPLANTOLOGY**

* A savings of 400,00 € compared to purchasing singularly

** The price includes standard seating.

SPECIAL OFFER:
FALL BUNDLE #2
for 1.750 €*
*incl. 19% VAT

The following single courses are included:

- Oct. 9th – 10th: SDS ALLINONE with Dr. Ulrich Volz
- Oct. 11th: Exclusive JCCI White Night Party
- Oct. 11th – 12th: 3rd JOINT CONGRESS for CERAMIC IMPLANTOLOGY**

* A savings of 200,00 € compared to purchasing singularly

** The price includes standard seating.

LEVEL 1 - CASE PLANNING

- X-ray and DVT analysis
- Possible applications of SDS implants
- Immediate or late implantation, diameter and lengths
- Special types: Sinus, Balcony, Shorty, Oval implant
- Creation of the planning animation for the patient
- Error analysis and complication management

LEVEL 2 - SURGERY HANDS-ON COURSE

- Incision and suture techniques on the artificial jaw
- The biological drilling protocol of SDS
- Implanting a wide range of indications and implant types on the artificial jaw
- SDSBOX Digital & Biological Workflow (2ingis®)
- Application of the SDSAIM navigation

LEVEL 3 - PROTHODONTICS HANDS-ON COURSE

- Prosthetic standards with SDS: from abutment preparation to crown insertion
- Insertion of the implant abutment and preparation
- Long-term temporaries fabrication with various manual techniques as well as digitally with CAD/CAM

LEVEL 4 - SDSALL

You will find all the information you need on the previous pages (see SDSALL).

Dr. Ulrich Volz SIGNATURE DAYS

Is now part of Level 4 of the CIW, but can also be booked as an individual course - see page 25.

SDS TEAMFLOW

TEAM Together Everybody Achieves More

Bring the expertise of SDS SWISS DENTAL SOLUTIONS directly into your practice and we will make your team fit for the biological dentistry of the future -
THE SWISS BIOHEALTH CONCEPT

DENTISTRY 2.0 - BIOLOGICAL- A NEW APPROACH

THE SWISS BIOHEALTH CONCEPT is a holistic treatment concept developed by Dr. Ulrich Volz that is unique in biological dentistry. The pioneering treatment concept with SDS ceramic implants can be adapted to the individual needs of each patient.

Qualified and competent staff is required for a successful treatment as well as satisfied patients. The SDS TEAM FLOW project supports your entire team and leads it to the perfect implementation of the treatment method of the future: THE SWISS BIOHEALTH CONCEPT. Your team will learn and understand the crucial biological background in order to apply the concept in everyday practice. The expert knowledge comes from first hand experience. You will enjoy an individual and exclusive training offer developed by practitioners for practitioners.

Your instructor Selma Julevic has been working with Dr. Volz for more than ten years and applies the content on a daily basis at the SWISS BIOHEALTH CLINIC. She teaches her experienced knowledge nationally in the SWISS BIOHEALTH EDUCATION CENTER as well as internationally. As a SWISS BIOHEALTH Academy Member, she is the driving force behind biological prophylaxis and developer of THE SWISS BIOHEALTH DENTALHYGIENE and PREVENTION MANAGEMENT CONCEPT.

„The work with Dr. Volz and the further training as an ART specialist with Dr. Dietrich Klinghardt at the Sophia Health Institute (Seattle/USA) has broadened my perspective on biological dentistry to a new level. Thereby I fully understood that holistic medicine and dentistry should not be considered separately and the greatest patient success is given by a perfectly coordinated team, with the perfectly educated patient.“

APPOINTMENTS BY ARRANGEMENT

MODULE 1 - EXCLUSIVE SURGICAL SUPPORT

Submit your patient case and we will support you and your team with the decisive details - regardless of whether you have already gained experience with SDS ceramic implants, are planning a challenging patient case or your first case is approaching. We will digitally evaluate your patient case with the SDS planning tool and identify your suitable implants. Together with you and your team, we will discuss the specifics of your case in advance and determine possible risks and opportunities (e.g.: correct application of the SDS drilling protocol, optimal vitamin D3 value/LDL value, etc.). Your team will gain important know-how on the handling of SDS ceramic implants by optimizing the hygiene processes of the surgical tray or discussing the correct use of the ozone device. Together with you we will conquer the path to future-oriented, minimally invasive and biological surgical techniques according to THE SWISS BIOHEALTH CONCEPT - all of this will happen live in your practice. We support and accompany you the whole day from set-up to time management. Together we will create your perfect team-workflow - for a perfect result and a HEALTHY & HAPPY patient.

LEARNING CONTENT

- Case planning and case discussion
- Selecting, delivery and configuration of ceramic implants
- Surgery preparation, surgery assistance and surgery follow-up
- Medical support protocol according to THE SWISS BIOHEALTH CONCEPT
- Support-Tool-Integration

MODULE 2 - THE BIOLOGICAL-MEDICAL ASSISTANCE

You are an SDS user and place SDS ceramic implants?
You want your team to speak the same language, live the same workflow and firmly integrate your biological practice philosophy into your practice structure?

Successful patient treatment according to the future-oriented SWISS BIOHEALTH CONCEPT requires a trained team. The optimal implementation of biological dentistry in combination with ceramic implants requires the practice team to understand the bio-medical and dental background. Core topics such as the explanation of the meridian system as well as interference fields in the oral cavity and their effects on the body are important components of this module. Through hands-on demonstrations, workshops and hands-on sequences participants will learn how the dental treatment of the future will work. From blood sampling, mixing and applying infusions to the Low Speed Centrifugation Concept, all medical adjunctive therapies relevant for THE SWISS BIOHEALTH CONCEPT are demonstrated step by step in practical exercises.

LEARNING CONTENT

- Basics of biological dentistry- THE SWISS BIOHEALTH CONCEPT
- Introduction to SDS ceramic implants
- Training for surgery preparation, surgery assistance and surgery follow-up
- Medical support protocol according to THE SWISS BIOHEALTH CONCEPT
- Support-Tool-Integration

MODULE 3 - SBH - THE BIOLOGICAL PROPHYLAXIS CONCEPT

Prophylaxis fundamentally requires a new approach and way of thinking. Experience the leading biological prophylaxis concept by and with Selma Julevic: THE SWISS BIOHEALTH DENTALHYGIENE and PREVENTION MANAGEMENT CONCEPT. This module will bring your biological practice philosophy and the prophylactic treatment up to date based on the latest scientific findings in biological medicine and dentistry.

Tailored to your needs, we coordinate the prophylaxis treatment together with your team. The main focus is on the root cause. Only after defining that it is possible to heal the patient in the long term. The focus here is on the supplementation of macro- and micronutrients as well as on detoxification possibilities of the lymphatic system. Experience an exclusive support with practical sequences in your practice. Learn about biological, clinical, as well as home-based - minimally invasive adjuvant therapy options in preventive and periodontitis therapy and implement them directly with your team.

LEARNING CONTENT

- Biological prophylaxis according to THE SWISS BIOHEALTH CONCEPT
- SDS-ceramic implants - Dos and Don'ts of professional dental cleaning
- Biological periodontitis concept
- Biological wound management
- Adjuvant biological therapy options in prophylaxis therapy

SDSONL

ONLINE COURSES

PRF & LSCC

Deepen your knowledge in the use of blood concentrates with the President of SBCB Prof. Dr. Shahram Ghanaati

PRF & LSCC

Blood concentrates represent the main pillar of biologization in dentistry. In this webinar, blood will be presented as the source of regeneration and the basis of blood concentrates. In addition, different blood concentrate systems and thus the role of blood cells as well as plasma proteins for tissue regeneration will be presented in a didactically structured manner based on the phases of wound healing. With the presentation of the LSCC (Low Speed Centrifugation Concept), the indication-based application of solid and liquid blood concentrates is presented in a clinically relevant way.

Numerous illustrative animations bring you closer to the practical work with blood concentrates. The explanation of the structured blood collection techniques as well as the presentation of a workstation for the application of blood concentrates in practice are helpful steps so that after the webinar blood collection and application of blood concentrates lose their supposed complexity. This webinar will set the course for routine use of blood concentrates in practice.

The course fee includes a 50-page course script, which is available in the download area of the e-learning program.

ONLINE COURSES

NUTRITION DESIGN

Learn about the complex topic of nutrition with this comprehensive online course

NUTRITION DESIGN

Nutrition is one of the most emotional topics of all. After this online course, you will be able to further improve your surgical and aesthetic results by providing targeted perioperative nutritional advice to your patients.

Recent studies prove that the building blocks of protein, carbohydrates and fats that we get from food and supplements are critical to rapid healing, collagen production, bone metabolism, periodontal health and the prevention of complications and inflammation. But you personally will also significantly improve your own energy levels and appearance by understanding the nutrients and compounds in your food.

Dr. Dominik Nischwitz, bestselling author, biological dentist, athlete and one of the top bio-hackers around, deals with the topic of nutrition like no one else. He explains the absolute basics of developing a long-term, individual nutritional design with the goal of optimal health and performance.

The course fee includes the nutrition design booklet according to Dr. Dominik Nischwitz, which is available in the download area of the e-learning program.

ONLINE COURSES

NICO

This course informs you about the theoretical foundations of NICOs

NICO

In this online course, Dr. Dr. Johann Lechner teaches you the theoretical principles of NICO, as well as the knowledge for diagnosis and therapy of residual bone inflammation.

NICO – what does that mean?

Chronic inflammation in the jawbone is not uncommon. In most cases, these inflammatory foci result from old, not optimally healed tooth extraction wounds, tooth attachments or foreign bodies. The result is a chronic overstimulation of the autonomic nervous system with sometimes serious problems for the entire body. This is called NICO - Neuralgia Inducing Cavitation Osteonecrosis. In addition to root canal treatment, NICO is another massive interference field for the entire body, which often prevents the patient from a complete recovery.

The first part of the online course focuses on pre-cancerous and pre-inflammatory niches in the jawbone, while the second part scientifically reassesses the „jaw interference field“.

ONLINE COURSES

NEURAL THERAPY

This course is about the basics of neural therapy and interference fields

NEURAL THERAPY

Neural therapy belongs to the regulatory and retuning therapies. The aim of regulation therapy is to normalize malfunctions of the organism. Neural therapy uses the local anesthetic procaine to briefly decouple interference fields, such as an impacted tooth, and thus simulate a successful treatment by a planned removal of this tooth in advance. In a matter of seconds, a treatment result can thus be ensured even before therapy begins.

The prerequisite for a neural therapeutic treatment is the exact knowledge of the anatomy and neurophysiology, which Dr. med. Rainer Wander will explain to you with the following points:

- Basics of Neural Therapy
- Concept of focal interference field - latest findings
- Pathways of the interference field
- Interference field tooth: effect on the whole body
- Demonstrations/injection techniques in the head area

The course fee includes a 148-page course script, which is available in the download area of the e-learning program.

SDSSPE

ISMI CERTIFIED SPECIALIST

CURRICULUM EXAMINATION SPECIALIST IN BIOLOGICAL DENTISTRY AND CERAMIC IMPLANTS

This extremely high-level curriculum is recognized by the two societies ISMI International Society for Metallfree Implantology and IAOCI International Academy Of Ceramic Implantology. Passing the exam entitles you to use the title „Specialist in Biological Dentistry and Ceramic Implants“, which was recently confirmed by the Bavarian Chamber of Dentists.

The curriculum was developed in 2016 from the continuing education program of the SWISS BIOHEALTH EDUCATION Center. It consists of compulsory courses, 100 completed and documented ceramic implant cases and is concluded with a written and oral examination, which is administered by the ISMI e.V. board.

EXAM DATES 2023

1. Submission of the photo book: Nov. 3, 2023 Subsequently, the evaluation by the exam commission will take place. If the result is positive, admission to the written examination will be granted.
2. Written examination must be taken online by Nov. 17, 2023. The evaluation is carried out by the examination board. In case of a positive result, admission to the oral examination will be granted.
3. Oral examination by examination board from Nov. 27 - Dec. 12, 2023 (via ZOOM or teams). If the result is positive, the candidate is awarded the title of Specialist in Biological Dentistry and Ceramic Implants.
4. The certificate will be handed over on Dec. 16, 2023 during the UPDATE COURSE at the SWISS BIOHEALTH EDUCATION CENTER.

ISMI | INT. SOCIETY
OF METAL FREE
IMPLANTOLOGY

IAOCI
INTERNATIONAL ACADEMY OF
CERAMIC IMPLANTOLOGY

GUIDELINES

COMPULSORY COURSES

- The Curriculum is composed of compulsory courses
- Previously attended certification courses at the SWISS BIOHEALTH EDUCATION CENTER are fully credited
- There is no time limit in which the Curriculum must be completed.

SUBMISSION OF CASE DOCUMENTATIONS (100 ceramic implants)

- A minimum of 100 completed and documented ceramic implants must be submitted
- The case documentation MUST be submitted as a photo book (at least DIN A4 format): X-ray/panorama (OPG) AND photos preoperative, postoperative and final prosthetics.
- 100% of the submitted cases must be prosthetically restored
- Minimum requirement: The implanted quadrant MUST be free of amalgam, metals and root-treated teeth
- Deadline for submitting the photo book: no later than 4 weeks before the exam date
- Admission to the examination takes place after review of the photo book and approval by the examination board
- The photo book can be ordered e.g. via the following website: www.cewe.de/cewe-fotobuch.html

WRITTEN EXAM

- The written exam consists of 89 multiple choice and open questions.
- The open questions must be answered cleanly and completely
- The total time of the written exam is 90 minutes
- The written exam is considered passed if at least 80% (164 points) are achieved
- During the courses at the SWISS BIOHEALTH EDUCATION CENTER all questions are intensively discussed
- The current documents of SDS Swiss Dental Solutions AG and SWISS BIOHEALTH® (THE SWISS BIOHEALTH CONCEPT®) contain all answers to the curriculum

IF THE 164 POINTS ARE NOT REACHED, THE FOLLOWING „JOKER“ CAN BE USED

10 additional points can be achieved by submitting a scientific paper on a specific topic. This should be submitted as a PDF with a minimum length of 5 to a maximum of 10 DIN A4 pages and must contain at least 10 references from PubMed.de. The paper will then be made available to all users in the SLACK-Channel #documents. Please contact us in time if you are interested, so that we can provide you with appropriate topics (example: vitamin K2 and blood thinners). Deadline: 4 weeks before the exam

ORAL EXAM

- Questions about the submitted case documentation
- Questions about the questions from the written exam that were not answered, not answered correctly or not answered completely

For more information visit our website

www.swissdentalsolutions.com/en/curriculum or scan the following QR code:

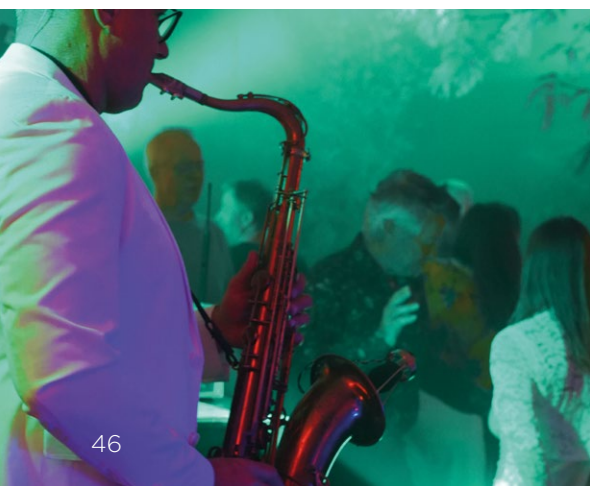

JCCI

JOINT CONGRESS FOR
CERAMIC IMPLANTOLOGY

Join us at the largest congress of its kind
for ceramic implants, blood concentrates and
biological dentistry

in Kreuzlingen, Switzerland at the SWISS BIOHEALTH EDUCATION CENTER

3rd JOINT CONGRESS for CERAMIC IMPLANTOLOGY

Ceramic implants are receiving a rapidly growing number of enthusiastic “followers” who appreciate the positive immunological impact on patient health.

We invite you to the JOINT CONGRESS for CERAMIC IMPLANTOLOGY to experience first-hand the newest developments in the field of ceramic implantology. You can expect some of the most distinguished international speakers who will share their insight and experience with you. Several prestigious scientific organizations as well as the leading ceramic implant companies will also be on hand to present the latest technology and innovations in the field as part of the industry exhibition that takes place during the congress.

SPEAKERS

The speakers will be announced on the JCCI website: www.joint-congress.de

ATTENDANCE CATEGORIES

Standard Seating

Separate booking of the WHITE NIGHT is possible

Preferred Seating

Reserved seats in the front rows of the audience
2 tickets for the WHITE NIGHT

VIP Seating

Reserved seats in the first row of the audience
Participation in the “Speakers Lunch”
2 tickets for the WHITE NIGHT

WHITE NIGHT

Exclusively for all participants of the JOINT CONGRESS for CERAMIC IMPLANTOLOGY, the legendary WHITE NIGHT PARTY, which by now has cult status, will take place again on Friday evening. DJ MattNautique, TOM X the SAX and a magician from Saint Tropez will make sure that the “air burns” on and off the dance floor.

DATE

Oct. 11 - 12, 2023 (bilingual - DE/EN)

CONGRESS HOURS

9:00 am - 5:00 pm

INVESTMENT 2023

Standard Seating	950 €
White Night	150 €
Preferred Seating	1.690 €
VIP Seating	1.980 €

You will receive continuing education credits for attending a course. Credits are awarded exclusively on the basis of the criteria established by "Continuing Education Credits BZÄK/DGZMK".

Cancellation

A written withdrawal from any training is possible up to 4 weeks before the start of any course or event. In this case, an administrative fee of 50 € will be charged.

In case of cancellation 4 weeks or less before a booked WEEK or DAYS course, a cancellation fee of 200 € is due; 14 days or less: 500 €; 7 days or less before the start of the training: 1.000 €. In case of cancellation 4 weeks or less before a course or conference, a cancellation fee of 50 €/course is due; 14 days or less: 200 €/course; 7 days or less before the start of the training: 300 €/course. In case of a no-show, the course fees are forfeited. The booked place is of course transferable to a substitute participant.

Arrival by car

By car you come via the Swiss highway A7, which ends at the German-Swiss border. From there it is only a few 100 m to us. Coming from the German highway A81 or the B33 from Constance you will find us only 150 m after the only inner city customs between Constance and Kreuzlingen.

Parking

There are sufficient parking spaces available in the GARDEN CITY parking garage. The parking garage is located in the same building as the SWISS BIOHEALTH EDUCATION CENTER. Please pay attention to the signs! Parking in front of the building is not allowed. Illegally parked vehicles will be towed away for a fee.

Arrival by plane

The Zurich Airport (ZRH) is the nearest airport. The Kreuzlingen train station is directly connected to the airport, so you can take the train to Kreuzlingen directly from the airport. The train ride takes about one to one and a half hours. You can find the timetable at www.sbb.ch.

Taxi

You can book a private transfer from/to the airport for example on the following website: www.ziil-taxi.ch

Arrival by train

The Kreuzlingen train station is only 100 meters away and can be reached within three minutes through an underpass.

Program subject to change!

BIOHEALTH
EDUCATION

LIFETIME WARRANTY

With immediate effect, SDS SWISS DENTAL SOLUTIONS is offering a lifetime warranty against fractures for its implant series' 1.1/1.2 and 2.0/2.2, as well as for the series 2.1 Value, beyond the previous claims policy and thus puts itself on par with e.g. Straumann's warranty for titanium implants.

Furthermore, we go a little further in that we will replace any implant free of charge for the first 6 months until the prosthetic restoration, even if it is lost, for example, due to incorrect loading during the healing phase. However, this „healing guarantee“ is only valid for users with a success rate that is less than 10% below the average of all our users and thus covers a range of 10% downwards during the learning curve. We were able to make this decision with great self-confidence, because after evaluating more than 120,000 implants of type 1.1/1.2 and 2.0/2.2 sold, we were able to recognize an outstanding success rate with an upward trend. Today, for example, we have a success rate of 97.5% and a fracture rate of around 0.2% over an

observation period of 24 to 81 months. The large comparative studies on titanium implants with up to around 10,000 implants (vs. our data set of > 120,000 implants) show a comparable success rate here, but a fracture rate of around 0.4%, which is about twice as high.* Thus, these statistics show what we know from our stress tests: SDS ceramic implants today are significantly more stable than titanium implants of the same diameter due to their geometry and quality of zirconium oxide processing. In figures: the two-piece implant with a diameter of 3.8mm (2.2_38xx) today manages 460N. Titanium implants with a diameter of 3.8mm are definitely lower. It would be desirable if, in the course of transparency, all (ceramic) implant companies would disclose their figures, success rates and fracture rates.

A cost-effective ceramic implant with the experience and safety of the world market leader? As the world market leader for ceramic implants, we have developed and launched a ceramic implant which is delivered including the post „2 in 1“ and, moreover, can be used „2 in 1“ either as a two-stage unloaded implant or, through immediate cementation of the post supplied, as a one-piece implant for immediate restoration. Ceramic implantology

has never been easier or more cost-effective, and with a complete price of €395, the VALU€ implant should not only be more affordable than its ceramic competitors, but also than many premium titanium implants*. Visit the free online „2.1 Fast Lane Certification Course“ today and start safely into the future of ceramic implantology!

BRIGHT

SDS1.2 and SDS2.2 BRIGHT

The premium product from the
WORLD MARKET LEADER IN CERAMIC DENTAL IMPLANTS

130, 000-times
proven thread design

Non-Touch
packaging

One- or two-piece,
countless indication possibilities!

compatible with the SDSBOX
full guided navigation system

SDS1.2 and SDS2.2 BRIGHT were developed drawing on over 20 years of experience in the field of ceramic implants. Our unique, natural implant form features the Dynamic Thread® design which has proven stability and delivers high clinical success rates. No other premium brand offers as many shapes and indication possibilities as SDS. SDS implants allow you to implant easily and safely – even in upper molar alveoli.

SDS is the first implant manufacturer to achieve both the “Trusted Quality” (product) and “Certified Production Quality” (production) seals from the CleanImplant Foundation for the production of the BRIGHT premium implants. SDS implants are made of zirconium oxide, which is biocompatible and supports the biological processes involved in healing. Choose the pioneer and world leader in ceramic dental implants. Choose SDS!

SDSPOD

With our SDS PODCASTS you can easily deepen your knowledge and understanding of the industry on the side:

ZOOM CONFERENCES

Our ZOOM conferences offer live, direct contact to our top experts. They are always announced through the newsletter and the broadcast list.

SDS 改善

CONSTANT & NEVER-ENDING IMPROVEMENT

SDS SUPPORT AUTOMATED - CENTRALIZED - PERSONALIZED

AUTOMATED

Simply scan the QR code (available as sticker or wooden cube) and select the service you need. Anytime and in

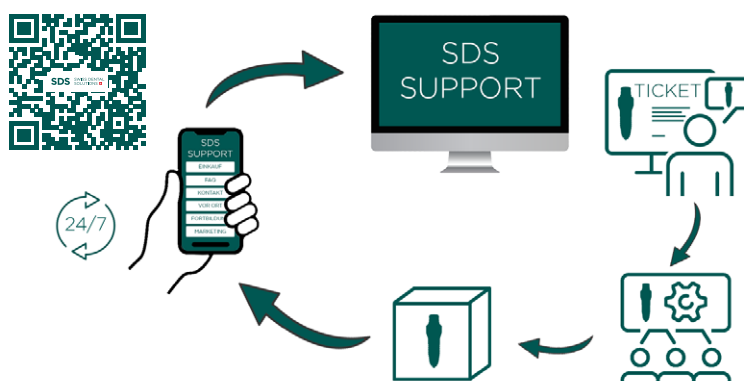

seconds! So that you don't have to wait for our response, many redundant services are available directly and 24/7.

CENTRALIZED

All your requests and orders enter our ERP and CRM system and start our response. Centrally in Kreuzlingen, the requested service is provided according to your wishes: the availability of surgery assistance, for example, is no longer „negotiated“ with a local person. You simply book your desired date and we ensure that a super competent person will be on site. Depending on the complexity of the case, sometimes even one of our SBC dentists will offer assistance. The binding online booking for your refer-

ral event also immediately activates our marketing team, which immediately individualizes the PPT or keynote presentation with your logo and sends it to you for further processing and use. This way, your support request is immediately out of your head and ours is immediately processed with the highest level of competence! Reliable and without delay, for your success!

PERSONALIZED

By automating your support request and centralized processing, you and we save a lot of time and effort! In return, we invest this time in an even more personal support by the highly competent team of SDS:

- We will provide you with even better and more personal support for your physical training at the SBE in Kreuzlingen and, from now on, we will come to you 4 times a year with our roadshow to bring new topics or, for example, the CleanImplant certification as a „Certified Dentist“ right to your doorstep.
- Callback request: this will be made by the most competent person possible, depending on the issue at hand.
- Virtual surgery support via emergency cell phone: in case of urgent support in an ongoing surgery, our clinic reception will immediately pass on your request to one of the SBC dentists and you will receive immediate support and trouble-shooting via a Whatsapp video call.
- The Flying Implant Service with our oral surgeon Dr.

Josephine Phillips can also be requested here

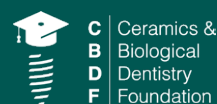

- Via Slack, your written question will be answered 7 days a week in a highly competent manner by one of our dentists or by one of the experienced users
- And via this WhatsApp number +49 171 35 47 968 you are in direct contact with Dr. Karl Ulrich Volz for very special and personal questions!

With this new SUPPORT CONCEPT, we are equipped to offer you an even better service in the future, which we will be able to maintain even with the expected strong growth in ceramic implantology.

Here is the QR code and link (www.swissdentalsolutions.com/support) for your reception or office. You can also order stickers or the nice wooden cube from us.

SCIENTIFIC SUPPORT

You have documented exciting cases with SDS ceramic implants or conducted an investigation/study but neither the time nor the experience to convert this into a proper scientific format, do the necessary literature research and publish it in an adequate paper?

We offer you highly professional support by a habilitated researcher, who can professionally assist you in these points in German and English.

How to use „SLACK“? Step by step:

- Request your invitation from the support-team
- Download the app from the App or Playstore
- Activate within 48 hours
- Set up your profile
- Share your experiences
- Follow netiquette

CREATE PROFILE

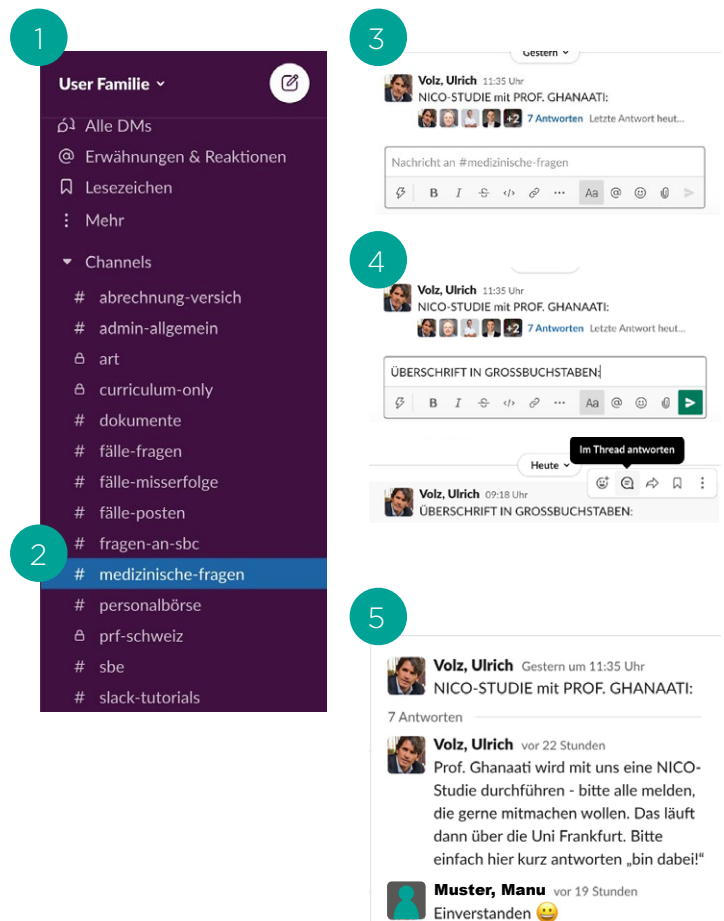

- Upload photo
- Last name, first name
- Dentist/Oral surgeon/OMS, City

FIRST STEPS

1. You are in the group [User Family](#)
2. Choose the [Channel](#), which fits to your request, e.g. #medical-questions
3. In this selected channel you will find individual [Threads](#), i.e. the starting points for various topics e.g. NICO-STUDY with PROF. GHANAATI
4. You can [create your own Threads](#) - with short titles with capital letters
5. You can also [comment on existing threads](#) with text and images

Tips and references:

- For more tips, check out #slack-tutorials
- For clarity, the individual layers must be respected accordingly
